(54) Title: NOVEL POTENT INDUCERS OF TERMINAL DIFFERENTIATION AND METHODS OF USE THEREOF

(57) Abstract

The present invention provides the compound having structure (I), wherein each of R₁ and R₂ are independently the same as or different from each other; when R_1 and R_2 are the same, each is a substituted or unsubstituted arylamino, cycloalkylamino, pyridineamino, piperidino, 9-purine-6-amine, or thiozoleamino group; when R₁ and R₂ are different, R₁ = R₃-N-R₄, wherein each of R₃ and R₄ are independently the same as or different from each other and are a hydrogen atom, a hydroxyl group, a substituted or unsubstituted, branched or unbranched alkyl, alkenyl, cycloalkyl, aryl, alkyloxy, aryloxy, arylalkyloxy, or pyridine group, or R₃ and R₄ bond together to form a piperidine group and R₂ is a hydroxylamino, hydroxyl, amino, alkylamino, dialkylamino or alkyloxy group; and n is an integer from about 4 to about 8. The present invention also provides a method of selectively inducing terminal differentiation of neoplastic cells and thereby inhibiting proliferation of such cells. Moreover, the present inventtion provides a method of treating a patient having a tumor characterized by proliferation of neoplastic cells. Lastly, the present invention provides a pharmaceutical composition comprising a pharmaceutically acceptable carrier and a therapeutically acceptable amount of the compound above.

NOVEL POTENT INDUCERS OF TERMINAL DIFFERENTIATION AND METHODS OF USE THEREOF

Background of the Invention

5

10

Throughout this application various publications are referenced by arabic numerals within parentheses. Full citations for these publications may be found at the end of the specification immediately preceding the claims. The disclosures of these publications in their entireties are hereby incorporated by reference into this application in order to more fully describe the state of the art to which this invention pertains.

Cancer is a disorder in which a population of cells has 15 become, in varying degrees, unresponsive to the control which normally mechanisms govern proliferation differentiation. For many years there have been two principal strategies for chemotherapeutic treatment of 20 cancer: a) blocking hormone-dependent tumor cell proliferation by interference with the production or peripheral action of sex hormones; and b) killing cancer cells directly by exposing them to cytotoxic substances, which injure both neoplastic and normal cell populations.

25

30

35

Relatively recently, cancer therapy is also being attempted by the induction of terminal differentiation of the neoplastic cells (1). In cell culture models differentiation has been reported by exposure of cells to a variety of stimuli, including: cyclic AMP and retinoic acid (2,3), aclarubicin and other anthracyclines (4).

There is abundant evidence that neoplastic transformation does not necessarily destroy the potential of cancer cells to differentiate (1,5,6). There are many examples of tumor cells which do not respond to the normal

E

15

20

25

30

35

regulators of proliferation and appear to be blocked in the expression of their differentiation program, and yet can be induced to differentiate and cease replicating. A variety of agents, including some relatively simple polar compounds (5,7-9), derivatives of vitamin D and retinoic acid (10-12), steroid hormones (13), growth (6,14), proteases (15,16), tumor promoters factors (17,18), and inhibitors of DNA or RNA synthesis (4,19-24), can induce various transformed cell lines and more explants to express tumor human primary differentiated characteristics.

Early studies by the present inventors identified a series of polar compounds that were effective inducers of differentiation in a number of transformed cell lines Of these, the most effective induce, was the (8,9). N,N'-hexamethylene compound polar/apolar hybrid The use of this polar/apolar (HMBA) (9). bsacetamide compound to induce murine erythroleukemia cells (MELC) to undergo erythroid differentiation with suppression of oncogenicity has proved a useful model to study inducermediated differentiation of transformed cells (5,7-9). HMBA-induced MELC terminal erythroid differentiation is Upon addition of HMBA to MELC a multistep process. (745A-DS19) in culture, there is a latent period of 10 to 12 hours before commitment to terminal differentiation is detected. Commitment is defined as the capacity of cells to express terminal differentiation despite removal of Upon continued exposure to HMBA there is inducer (25). progressive recruitment of cells to differentiate. present inventors have reported that MELC cell lines made resistant to relatively low levels of vincristine become markedly more sensitive to the inducing action of HMBA and can be induced to differentiate with little or no latent period (26).

HMBA is capable of inducing phenotypic changes consistent

13

with differentiation in a broad variety of cells lines The characteristics of the drug induced effect have been most extensively studied in the murine erythroleukemia cell system (MELC) (5,25,27,28). MELC induction differentiation of is both time and concentration dependent. The minimum concentration required to demonstrate an effect in vitro in most strains is 2 to 3 mM; the minimum duration of continuous exposure generally required to induce differentiation in a substantial portion (>20%) of the population without continuing drug exposure is about 36 hours.

The primary target of action of HMBA is not known. is evidence that protein kinase C is involved in the 15 pathway of inducer-mediated differentiation (29). The in vitro studies provided a basis for evaluating the potential of HMBA as a cytodifferentiation agent in the treatment of human cancers (30). Several phase I clinical trials with HMBA have been completed (31-36). 20 Clinical trials have shown that this compound can induce a therapeutic response in patients with cancer (35,36). I these phase clinical trials also have demonstrated that the potential efficacy of HMBA is limited, in part, by dose-related toxicity which prevents 25 achieving optimal blood levels and by the need for intravenous administration of large quantities of the agent, over prolonged periods.

Recently, the present inventors have reported a number of compounds related to HMBA with polar groups separated by apolar linkages that, on a molar basis, are as active (37) or 100 times more active than HMBA (38). As a class, however, it has been found that the symmetrical dimers such as HMBA and related compounds are not the best cytodifferentiating agents.

It has unexpectedly been found that the best compounds

comprise two polar end groups separated by a flexible chain of methylene groups, wherein one or both of the polar end groups is a large hydrophobic group. Preferably, the polar end groups are different and only one is a large hydrophobic group. These compounds are unexpectedly a thousand times more active than HMBA and ten times more active than HMBA related compounds.

This new class of compounds of the present invention may be useful for selectively inducing terminal differentiation of neoplastic cells and therefore aid in treatment of tumors in patients.

Summary of the Invention

The present invention provides the compound having the structure:

5

$$C \longrightarrow CH_2 \longrightarrow C$$

10

15

20

herein each of R_1 and R_2 are independently the same as or different from each other; when R_1 and R_2 are the same, each is a substituted or unsubstituted arylamino, cycloalkylamino, pyridineamino, piperidino, 9-purine-6-amine, or thiozoleamino group; when R_1 and R_2 are different, $R_1 = R_3$ -N- R_4 , wherein each of R_3 and R_4 are independently the same as or different from each other and are a hydrogen atom, a hydroxyl group, a substituted or unsubstituted, branched or unbranched alkyl, alkenyl, cycloalkyl, aryl, alkyloxy, aryloxy, arylakyloxy, or pyridine group, or R_3 and R_4 bond together to form a piperidine group and R_2 is a hydroxylamino, hydroxyl, amino, alkylamino, dialkylamino or alkyloxy group; and n is an integer from about 4 to about 8.

25

The present invention also provides the compound above having the structure:

30

35

wherein each of R_3 and R_4 are independently the same as or different from each other and are a hydrogen atom, a hydroxyl group, a substituted or unsubstituted, branched

or unbranched alkyl, alkenyl, cycloalkyl, aryl, alkyloxy, aryloxy, arylalkyloxy, or pyridine group, or R_3 and R_4 bond together to form a piperidine group; R_2 is a hydroxylamino, hydroxyl, amino, alkylamino, dialkylamino or alkyloxy group; and n is an integer from about 4 to about 8.

The present invention also provides the compound above having the structure:

10

5

$$\begin{array}{c}
\mathbb{R} \\
\mathbb{C} \longrightarrow \mathbb{C} \\
\mathbb{R}
\end{array}$$

15

wherein R is a substituted or unsubstituted arylamino, cycloalkylamino, pyridineamino, piperidino, 9-purine-6-amine, or thiozoleamino group; and n is an integer from about 4 to about 8.

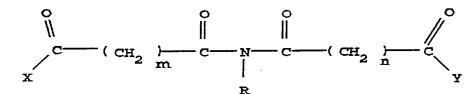

20

The present invention also provides the compound having the structure:

25

30

35

wherein each of X and Y are independently the same as or different from each other and are a hydroxyl, amino or hydroxylamino group, a substituted or unsubstituted alkyloxy, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group; R is a hydrogen atom, a hydroxyl group, a substituted or unsubstituted alkyl, aryl, alkyloxy, or aryloxy group; and each of m and n are independently the same as or

different from each other and are each an integer from about 0 to about 8.

The present invention further provides the compound having the structure:

10

15

20

wherein each of X and Y are independently the same as or different from each other and are a hydroxyl, amino or hydroxylamino group, a substituted or unsubstituted alkylamino, alkyloxy, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group; R_1 and R_2 are independently the same as or different from each other and are a hydrogen atom, a hydroxyl group, a substituted or unsubstituted alkyl, aryl, alkyloxy, or aryloxy group; and each of m, n, and o are independently the same as or different from each other and are each an integer from about 0 to about 8.

The present invention still further provides the compound having the structure:

30

35

wherein each of X and Y are independently the same as or different from each other and are a hydroxyl, amino or hydroxylamino group, a substituted or unsubstituted alkyloxy, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino,

alkyloxyalkylamino, or aryloxyalkylamino group; each of $\mathbf{R_1}$ and $\mathbf{R_2}$ are independently the same as or different from each other and are a hydrogen atom, a hydroxyl group, a substituted or unsubstituted alkyl, aryl, alkyloxy, or aryloxy group; and each of m and n are independently the same as or different from each other and are each an integer from about 0 to about 8.

The present invention also provides the compound having the structure:

15

20

10

wherein each of X and Y are independently the same as or different from each other and are a hydroxyl, amino or hydroxylamino group, a substituted or unsubstituted alkylamino, dialkylamino, arylamino, alkyloxy, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group; and each of m and n are independently the same as or different from each other and are each an integer from about 0 to about 8.

25

The present invention also provides the compound having the structure:

30
$$\frac{C}{X}$$
 $\frac{CH_{2m}}{C}$ $\frac{R_1}{C}$ $\frac{R_2}{N}$ $\frac{R_2}{N}$ $\frac{CH_{2m}}{C}$ $\frac{CH_{2m}}{N}$ $\frac{C}{N}$

30

35

wherein each of X and Y are independently the same as or different from each other and are a hydroxyl, amino or hydroxylamino group, a substituted or unsubstituted alkylamino, dialkylamino, arylamino, alkyloxy, alkylarylamino, alkyloxyamino, aryloxyamino,

alkyloxyalkylamino, or aryloxyalkylamino group; each of R_1 and R_2 are independently the same as or different from each other and are a hydrogen atom, a hydroxyl group, a substituted or unsubstituted alkyl, aryl, alkyloxy, or aryloxy group; and each of m and n are independently the same as or different from each other and are each an integer from about 0 to about 8.

The present invention further provides the compound 10 having the structure:

15

20

wherein each of X and Y are independently the same as or different from each other and are a hydroxyl, amino or hydroxylamino group, a substituted or unsubstituted alkyloxy, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group; and n is an integer from about 0 to about 8.

The present invention still further provides the compound having the structure:

$$\begin{array}{c}
C \longrightarrow (CH_2)_{\overline{m}} & C \longrightarrow (CH_2)_{\overline{n}} & C \longrightarrow (CH_2)_{\overline{n}}
\end{array}$$

30

35

wherein each of X and Y are independently the same as or different from each other and are a hydroxyl, amino or hydroxylamino group, a substituted or unsubstituted alkyloxy, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group; each of

 R_1 and R_2 are independently the same as or different from each other and are a hydrogen atom, a hydroxyl group, a substituted or unsubstituted alkyl, aryl, alkyloxy, aryloxy, carbonylhydroxylamino, or fluoro group; and each of m and n are independently the same as or different from each other and are each an integer from about 0 to about 8.

The present invention also provides the compound having the structure:

15

20

wherein each of R_1 and R_2 are independently the same as or different from each other and are a hydroxyl, alkyloxy, amino, hydroxylamino, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group.

The present invention also provides the compound having the structure:

25

30

35

wherein each of R_1 and R_2 are independently the same as or different from each other and are a hydroxyl, alkyloxy, amino, hydroxylamino, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group.

The present invention further provides the compound

having the structure:

$$_{5}$$
 $_{\text{CH}}$ $_{\text{CH}}$ $_{\text{CH}}$ $_{\text{CH}}$

wherein each of R₁ and R₂ are independently the same as or different from each other and are a hydroxyl, alkyloxy, amino, hydroxylamino, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group.

In addition, the present invention provides a method of selectively inducing terminal differentiation of neoplastic cells and thereby inhibiting proliferation of such cells which comprises contacting the cells under suitable conditions with an effective amount of any of the compounds above, effective to selectively induce terminal differentiation.

20

25

30

10

15

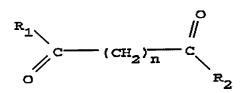

The present invention also provides a method of treating a patient having a tumor characterized by proliferation of neoplastic cells which comprises administering to the patient an effective amount of any of the compounds above, effective to selectively induce terminal differentiation of such neoplastic cells and thereby inhibit their proliferation.

Lastly, the present invention provides a pharmaceutical composition comprising a pharmaceutically acceptable carrier and a therapeutically acceptable amount of any of the compounds above.

Detailed Description of the Invention

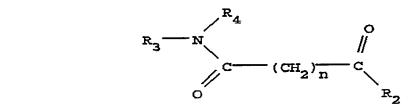

The present invention provides the compound having the structure:

5

wherein each of R_1 and R_2 are independently the same as or different from each other; when R₁ and R₂ are the same, each is a substituted or unsubstituted arylamino, cycloalkyl-amino, pyridineamino, piperidino, 9-purine-6amine, or thiozoleamino group; when R₁ and R₂ are different, $R_1 = R_3-N-R_4$, wherein each of R_3 and R_4 are 15 independently the same as or different from each other and are a hydrogen atom, a hydroxyl group, a substituted or unsubstituted, branched or unbranched alkyl, alkenyl, cycloalkyl, aryl, alkyloxy, aryloxy, arylalkyloxy, or pyridino group, or R_3 and R_4 bond together to form a 20 piperidine group and R_2 is a hydroxylamino, hydroxyl, amino, alkylamino, dialkylamino or alkyloxy group; and n is an integer from about 4 to about 8.

25 The present invention also provides the compound above having the structure:

30

35

wherein each of R_3 and R_4 are independently the same as or different from each other and are a hydrogen atom, a hydroxyl group, a substituted or unsubstituted, branched or unbranched alkyl, alkenyl, cycloalkyl, aryl, alkyloxy, aryloxy, arylalkyloxy, or pyridine group, or R_3 and R_4

bond together to form a piperidine group; R₂ is a hydroxylamino, hydroxyl, amino, alkylamino, dialkylamino or alkyloxy group; and n is an integer from about 4 to about 8.

5

10

25

30

In the preferred embodiment of the compound above, R_2 is a hydroxylamino, hydroxyl, amino, methylamino, dimethylamino, or methyoxy group and n is 6. Most preferably, R_4 is a hydrogen atom and R_3 is a substituted or unsubstituted phenyl group.

The phenyl group may be substituted with a methyl, cyano, trifluoromethyl, amino, aminocarbonyl, methylcyano, chloro, fluoro, bromo, iodo, 2,3-difluoro, 2,4-difluoro, 2,5-difluoro, 3,4-difluoro, 3,5-difluoro, 15 2,6-difluoro, 1,2,3-trifluoro, 2,3,6-trifluoro, 2,4,6trifluoro, 3,4,5-trifluoro, 2,3,5,6-tetrafluoro, 2,3,4,5,6-pentafluoro, azido, hexyl, t-butyl, phenyl, carboxyl, hydroxyl, methyoxy, benzyloxy, phenylaminooxy, 20 phenylmethoxy, phenylamino-carbonyl, methyoxycarbonyl, methylaminocarbonyl, dimethylamino, dimethylaminocarbonyl, or hydroxylamino-carbonyl group.

In other preferred embodiments of the compound above, R_{λ} is a hydrogen atom and R_3 is a cyclohexyl group; R_4 is a hydrogen atom and R₃ is a methyoxy group; R_3 and R_{λ} each bond together to form a piperidine group; R_{l} is a hydrogen atom and R3 is a hydroxyl group; is a hydrogen atom and R, is a benzyloxy group; \mathbf{R}_{λ} is a hydrogen atom and R_3 is a δ -pyridine group; R_{λ} is a hydrogen atom and R, is a \(\beta\)-pyridine group; R_{i} is a hydrogen atom and R_3 is a α -pyridine group; R_3 and R_{λ} are both methyl groups; or R_{λ} is a methyl group and R_{3} is a phenyl group.

The present invention also provides the compound having the structure:

5

wherein R is a substituted or unsubstituted arylamino, cycloalkylamino, pyridineamino, piperidino, 9-purine-6-amine, or thiozoleamino group; and n is an integer from about 4 to about 8.

In the preferred embodiment of the compound above, R is a substituted or unsubstituted phenylamino group. The phenylamino group may be substituted with a cyano, methylcyano, nitro, carboxyl, aminocarbonyl, methylaminocarbonyl, dimethylaminocarbonyl, trifluoromethyl, hydroxylaminocarbonyl, N-hydroxylaminocarbonyl, methoxycarbonyl, chloro, fluoro, methyl, methoxy, 2,3-difluoro, 2,3-difluoro, 2,4-difluoro, 2,5-difluoro, 2,6-difluoro, 3,5-difluoro, 2,6-difluoro, 2,3,6-trifluoro, 1,2,3-trifluoro, 3,4,5-trifluoro, 2,3,4,5-tetrafluoro, or 2,3,4,5,6-pentafluoro group.

In another embodiment of the compound above, R is a cyclohexylamino group.

30 The present invention also provides the compound having the structure:

35
$$C = (CH_2)_{\overline{m}} = C = N = C = (CH_2)_{\overline{n}} = C = CH_2$$

wherein each of X and Y are independently the same as or different from each other and are a hydroxyl, amino or hydroxylamino group, a substituted or unsubstituted alkyloxy, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group; hydrogen atom, a hydroxyl group, a substituted unsubstituted alkyl, aryl, alkyloxy, or aryloxy group; and each of m and n are independently the same as or different from each other and are each an integer from about 0 to about 8.

In the preferred embodiment of the compound above, each of X, Y, and R is a hydroxyl group and each of m and n is 5.

The present invention also provides the compound having the structure:

20

10

$$\begin{array}{c|c}
C & CH_2 & CH$$

25

30

35

wherein each of X and Y are independently the same as or different from each other and are a hydroxyl, amino or hydroxylamino group, a substituted or unsubstituted alkylamino, alkyloxy, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group; each of R₁ and R₂ are independently the same as or different from each other and are a hydrogen atom, a hydroxyl group, a substituted or unsubstituted alkyl, aryl, alkyloxy, or aryloxy group; and each of m, n, and o are independently the same as or different from each other and are each an integer from about 0 to about 8.

In the preferred embodiment of the compound above, each of X and Y is a hydroxyl group and each of R_1 and R_2 is a methyl group. Most preferably, each of n and o is 6, and m is 2.

5

The present invention also provides the compound having the structure:

10

wherein each of X and Y are independently the same as or 15 different from each other and are a hydroxyl, amino or hydroxylamino group, a substituted or unsubstituted dialkylamino, alkylamino, alkyloxy, alkyloxyamino, aryloxyamino, alkylarylamino, alkyloxyalkylamino, or aryloxyalkylamino group; each of 20 $\mathbf{R_1}$ and $\mathbf{R_2}$ are independently the same as or different from each other and are a hydrogen atom, a hydroxyl group, a substituted or unsubstituted alkyl, aryl, alkyloxy, or aryloxy group; and each of m and n are independently the same as or different from each other and are each an 25 integer from about 0 to about 8.

The present invention also provides the compound having the structure:

30

35

wherein each of X and Y are independently the same as or

different from each other and are a hydroxyl, amino or hydroxylamino group, a substituted or unsubstituted alkyloxy, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group; and each of m and n are independently the same as or different from each other and are each an integer from about 0 to about 8.

In the preferred embodiment of the compound above, each of X and Y is a hydroxyl group and each of m and n is 5.

The present invention also provides the compound having the structure:

15

25

30

wherein each of X and Y are independently the same as or different from each other and are a hydroxyl, amino or hydroxylamino group, a substituted or unsubstituted alkyloxy, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group; each of R_1 and R_2 are independently the same as or different from each other and are a hydrogen atom, a hydroxyl group, a substituted or unsubstituted alkyl, aryl, alkyloxy, or aryloxy group; and each of m and n are independently the same as or different from each other and are each an integer from about 0 to about 8.

The present invention also provides the compound having the structure:

5

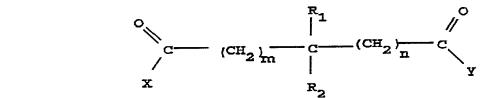

wherein each of X and Y are independently the same as or different from each other and are a hydroxyl, amino or hydroxylamino group, a substituted or unsubstituted alkyloxy, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino,

alkyloxyalkylamino, or aryloxyalkylamino group; and n is an integer from about 0 to about 8.

In the preferred embodiment of the compound above, each of X and Y is a dimethylamino group and n is 4 or 5.

20

The present invention also provides the compound having the structure:

25

30

35

wherein each of X and Y are independently the same as or different from each other and are a hydroxyl, amino or hydroxylamino group, a substituted or unsubstituted alkyloxy, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group; each of R_1 and R_2 are independently the same as or different from each other and are a hydrogen atom, a hydroxyl group, a substituted or unsubstituted alkyl, aryl, alkyloxy,

aryloxy, carbonylhydroxylamino, or fluoro group; and each of m and n are independently the same as or different from each other and are each an integer from about 0 to about 8.

5

10

In the preferred embodiment of the compound above, each of X and Y is a hydroxylamino group, R_1 is a methyl group, R_2 is a hydrogen atom, and each of m and n is 2. In another preferred embodiment, each of X and Y is a hydroxylamino group, R_1 is a carbonylhydroxylamino group, R_2 is a hydrogen atom, and each of m and n is 5. In a further preferred embodiment, each of X and Y is a hydroxylamino group, each of R_1 and R_2 is a fluoro group, and each of m and n is 2.

15

The present invention also provides the compound having the structure:

20

wherein each of R₁ and R₂ are independently the same as or different from each other and are a hydroxyl, alkyloxy, amino, hydroxylamino, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group.

30

Preferably, R_1 is a phenylamino group and R_2 is a hydroxylamino group.

The present invention also provides the compound having the structure:

$$R_1$$
 CH CH CH R_2

wherein each of R₁ and R₂ are independently the same as or different from each other and are a hydroxyl, alkyloxy, amino, hydroxylamino, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group.

Preferably, R_1 is phenylamino group and R_2 is hydroxylamino group.

The present invention also provides the compound having the structure:

 $_{CH}$
 $_{R_{2}}$

wherein each of R_1 and R_2 are independently the same as or different from each other and are a hydroxyl, alkyloxy, amino, hydroxylamino, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group.

In the preferred embodiment, either R_1 or R_2 is a hydroxylamino group.

The present invention also provides a method of

selectively inducing terminal differentiation of neoplastic cells and thereby inhibiting proliferation of such cells which comprises contacting the cells under suitable conditions with an effective amount of any of the compounds above, effective to selectively induce terminal differentiation.

The contacting must be performed continuously for a prolonged period of time, i.e. for at least 48 hours, preferably for about 4-5 days or longer.

The method may be practiced in vivo or in vitro. If the method is practiced in vitro, contacting may be effected by incubating the cells with the compound. The concentration of the compound in contact with the cells should be from about 1 μ M to about 25 mM, preferably from 4 μ M to about 5 mM. The concentration depends upon the individual compound and the state of the neoplastic cells.

20

25

10

15

The method may also comprise initially treating the cells with an antitumor agent so as to render them resistant to an antitumor agent and subsequently contacting the resulting resistant cells under suitable conditions with an effective amount of any of the compounds above, effective to selectively induce terminal differentiation of such cells.

The antitumor agent may be one of numerous chemotherapy agents such as an alkylating agent, an antimetabolite, a 30 hormonal agent, an antibiotic, colchicine, a vinca alkaloid, L-asparaginase, procarbazine, hydroxyurea, mitotane, nitrosoureas imidazole carboxamide. or an Suitable agents are those agents which promote 35 depolarization of tubulin. Preferably the antitumor agent is colchicine or a vinca alkaloid; especially preferred are vinblastine and vincristine. In

20

25

30

35

embodiments where the antitumor agent is vincristine, the cells preferably are treated so that they are resistant to vincristine at a concentration of about 5 mg/ml. The treating of the cells to render them resistant to an antitumor agent may be effected by contacting the cells with the agent for a period of at least 3-5 days. The contacting of the resulting cells with any of the compounds above is performed as described previously.

The present invention also provides a method of treating a patient having a tumor characterized by proliferation of neoplastic cells which comprises administering to the patient an effective amount of any of the compounds above, effective to selectively induce terminal differentiation of such neoplastic cells and thereby inhibit their proliferation.

The method of the present invention is intended for the treatment of human patients with tumors. However, it is also likely that the method would be effective in the treatment of tumors in other mammals. The term tumor is caused by cancer intended to include any proliferation of neoplastic cells, such as lung cancer, melanoma, renal bladder lymphoid myeloma, carcinoma, breast carcinoma, or colorectal carcinoma. The administration of the compound to the patient may be effected orally or parenterally. To date, administration effective. The to be intravenously has proven must be performed administration compound of the continuously for a prolonged period of time, such as for at least 3 days and preferably more than 5 days. preferred embodiments, administration is the effected continuously for at least 10 is days and repeated at intervals wherein at each interval the administration is continuously effected for at least 10 days. For example, the administration may be effected at intervals as short as 5-10 days, up to about 25-35 days

30

and continuously for at least 10 days during each such interval. The optimal interval period will vary depending on the type of patient and tumor. For example, in the incidence of acute leukemia, the so called myelodysplastic syndrome, continuous infusion would seem to be indicated so long as the patient tolerated the drug without toxicity and there was a positive response.

The amount of the compound administered to the patient is less than an amount which would cause toxicity in the 10 In the certain embodiments, the amount of the compound which is administered to the patient is less than the amount which causes a concentration of the compound in the patient's plasma to equal or exceed the 15 toxic of the compound. Preferably, the concentration of the compound in the patient's plasma is maintained at about 1.0 mM. It has been found with HMBA that administration of the compound in an amount from about 5 gm/m²/day to about 30 gm/m²/day, particularly qm/m²/day, is effective without producing 20 about 20 toxicity in the patient. The optimal amount of the compound which should be administered to the patient in the practice of the present invention will depend on the particular compound used and the type of cancer being 25 treated.

This invention, in addition to above the listed compounds, is intended to encompass the use of homologs and analogs of such compounds. In this context, homologs are molecules having substantial structural similarities to the above-described compounds and analogs molecules having substantial biological similarities regardless of structural similarities.

The method may also comprise initially administering to the patient an amount of an antitumor agent to render the cells resistant to an antitumor agent and subsequently

administering to the patient an effective amount of any of the compounds above, effective to selectively induce terminal differentiation of such neoplastic cells and thereby inhibit their proliferation.

5

10

15

20

35

The antitumor agent may be one of numerous chemotherapy agents such as an alkylating agent, an antimetabolite, a hormonal agent, an antibiotic, colchicine, alkaloid, L-asparaginase, procarbazine, hydroxyurea, mitotane, nitrosoureas or an imidazole carboxamide. agents which those Suitable agents are Preferably the antitumor depolarization of tubulin. agent is colchicine or a vinca alkaloid; vincristine. and vinblastine preferred are embodiments where the antitumor agent is vincristine, an amount is administered to render the cells are resistant to vincristine at a concentration of about 5 mg/ml. administration of the agent is performed essentially as described above for the administration of any of the Preferably, the administration of the agent compounds. is for a period of at least 3-5 days. The administration of any of the compounds above is performed as described previously.

The present invention also provides a pharmaceutical composition comprising a pharmaceutically acceptable carrier, such as sterile pyrogen-free water, and a therapeutically acceptable amount of any of the compounds above. Preferably, the effective amount is an amount effective to selectively induce terminal differentiation of suitable neoplastic cells and less than an amount which causes toxicity in a patient.

Lastly, the present invention provides the pharmaceutical composition above in combination with an antitumor agent. The antitumor agent may be any of the agents previously described.

The invention is illustrated in the Experimental Details section which follows. This section is set forth to aid in an understanding of the invention but is not intended to, and should not be construed to, limit in any way the invention as set forth in the claims which follow thereafter.

Experimental Details

Cells and Materials

MELC 745A-DS19 cells and the variants of MELC derived 5 from this cell line, namely, the vincristine-resistant MELC V3.17 and VCR.C(2)15 cell lines (26), and the dimethylsulfoxide-resistant cell line, DR10 (39), were maintained in alpha minimal essential medium containing Cell cultures for all 10% fetal calf serum (16). 10 experiments were initiated with cells in logarithmic growth phase (day 2 cultured cells) at a density of 105 Inducer compounds were added in the final concentrations indicated below, dissolved in culture serum unless otherwise medium without fetal calf 15 indicated. Cell density and benzidine reactively were determined as described (16).

Commitment to terminal differentiation, characterized by limited cell division (colony size <32 cells) and accumulation of hemoglobin (benzidine reactive colonies) was assayed by a colony cloning assay using 2% methylcellulose as described (25) (see Table 1 for results).

25

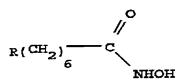

HL-60 human leukemia cells, derived from peripheral blood leukocytes of a patient with acute promyelocytic leukemia (40). Induced differentiation of HL-60 cells assayed by determining the proportion of cells that developed the capacity to reduce nitroblue tetrazolium (NBT) (41) (see Table 2 for results).

Preparation of PhCH2ONHOC(CH2)6COOCH3:

A solution of suberic acid monomethyl ester (1.9 g; 0.01 mol), oxaloyl chloride (1.75 mL; 2.54 g; 0.02 mol) and 0.1 mL DMF in benzene (200 mL) was stirred overnight at The solvent was evaporated and oily room temperature. residue was dissolved in chloroform (~20 mL) and mixed together with chloroform solution (100 mL) benzylhydroxylamine (2.46 g; 0.02 mol) and pyridine (1.6 mL; 1.68 g; 0.02 mol). The reaction mixture was stirred at room temperature overnight. The chloroform solution was washed with water (50 mL), 10% hydrochloric acid, and again with water $(2 \times 50 \text{ mL})$. The organic layer was dried over anhydrous magnesium sulfate and evaporated. The solid residue was slurried in hexanes (~100 mL) and The yield of PhCH,ONHOC(CH,),COOCH, was 2.61 g (89%).

The above suberic acid monobenzyloxyamide monomethyl ester (1 g; 3.4 mol) was dissolved in dry methanol (50 mL) and 5% Pd-C (50 mg) was added. The black suspension was shaken under hydrogen pressure (~50 psi) overnight at room temperature. The catalyst was separated by filtration, and filtrate was evaporated. The solid residue was slurried in hexanes (~20 mL) and filtered. The yield of the monomethyl ester monohydroxamic acid of suberic acid was 900 mg (95%).

Compounds having the general structure:

wherein n = 4, 5, 6, and 7.

General Procedure A

A pyridine (500 mL) suspension of O-benzylhydroxylamine 5 hydrochloride (3.2 g; 0.02 mol) and the corresponding diacid dichloride (0.04 mol) was stirred temperature for three days. Water (10 mL) was added and stirring was continued overnight. The solvent was 10 evaporated and solid residue was purified by column chromatography on silica gel in tetrahydrofuran-methanol. The diacid product was dissolved in methanol (100 mL) and 5% Pd-C (100 mg) was added. The reaction suspension was shaken overnight under hydrogen pressure (~50 psi). 15 catalyst was separated by filtration, solid residue was washed with hot methanol (5 x 50 ml). The combined methanolic filtrates were evaporated. The solid residue was slurried in acetone and filtered. The yield was 10-20%.

20

General procedure B

A pyridine (500 ml) solution of O-benzylhydroxylamine (2.46 g; 0.02 mol) and the corresponding dicarboxylic acid monobenzyl ester monoacid chloride (0.04 mol) was 25 stirred at room temperature overnight. The solvent was The semisolid residue was dissolved in evaporated. chloroform (300 mL) and extracted with 5% hydrochloric acid (2 x 50 mL), 10% potassium hydroxide (3 x 100 mL), 30 and water (2 x 100 mL). The organic layer was dried over anhydrous magnesium sulfate and evaporated. The solid residue was purified by column chromatography on silica in ethyl acetate. The tribenzyl product was dissolved in methanol (100 mL) and 5% Pd-C (100 mg) was added. The reaction suspension was shaken under hydrogen 35 pressure (~50 psi) at room temperature overnight. solid was separated by filtration and washed with hot

methanol (5 x 50 mL). The combined methanol filtrates were evaporated to solid residue. The solid residue was slurried in cooled acetone and filtered. The yield of target product was 30-60%.

5

¹H NMR (DMSO-d₆, 200MHz), δ (ppm) 11.53 (s, COOH, 1H); 2.41 (t, J=7.2Hz, CH₂CON(OH)COCH₂, 4H); 2.18 (t, J=7.0Hz, CH₂COOH, 4H); 1.52 (m, 8h); 1.22 (m, H). MS (FAB, glycerin) 346 (M + 1)

30

35

A pyridine (500 mL) solution of the monomethyl ester monoacid chloride of dicarboxylic acid (0.02 mol) and N,N'-dimethyl-1, ω -diaminoalkane (0.01 mol) was stirred at room temperature overnight. Solvent was evaporated and oily residue was dissolved in chloroform (300 mL). Chloroform solution was washed with water (3 x 50 mL), 10% potassium hydroxide (3 x 50 mL), 10% hydrochloric acid (3 x 50 mL), and again with water (3 x 50 mL). The organic layer was dried and evaporated. The oily residue was dissolved in potassium hydroxide (1.2 g; 0.021 mol) in 80% methanol (100 mL). The reaction mixture was refluxed two hours. The solvent was evaporated and solid residue was dissolved in water (50 mL) and extracted with chloroform (3 x 50 mL). Water solution was acidified to

10

20

pH~5 and concentrated (to volume of about 10 mL). The water solution or suspension was cooled down and precipitate was separated by filtration. The solid product was purified by crystallization from ethyl acetate. The yield was 40-60%.

¹H NMR (CDCl₃, 200 MHz), δ (ppm) 8.15 (s, broad, COOH, 2H); 3.52 + 3.45 (2s, CH₂N, 4H); 3.01 + 2.93 (2s, CH₃N, 6H); 2.30 (4t, CH₂CO, 8H); 1.60 (m, 8H); 1.32 (m, 8H).

¹H NMR (DMSO-d₆, 200 MHz), δ (ppm) 3.44 + 3.336 + 3.36 (3s, CH₂N, 4H); 2.94 + 2.90 + 2.79 (3s, CH₃N, 6H); 2.27 + 2.23 + 2.12 (3t, CH₂CO, 8H); 1.46 (m, 8H); 1.23 (m, 8H).

Compounds having the structure:

A pyridine (500 mL) solution of 6-aminocapric acid (2.6 g; 0.02 mol) and terephthaloyl chloride (2 g; 0.01 mol) was stirred at room temperature overnight (~12 hours), and at 90°C for 23 hours. The solvent was evaporated, and the solid residue was crystallized from water (10 mL) four times. The yield was 800 mg (19%). ¹H NMR (DMSO-d₆, 200 MH), δ(ppm) 12.8 (s, broad, COOH, 2H); 8.54 + 7.72 (2t, NH, 2H); 3.24 + 2.98 (2m, NHCH₂, 4H); 2.20 + 2.03 (2m, CH₂CO, 4H); 1.50 (m, 8H); 1.32 (m, 4H).

$$(CH_2)_n$$
 C

25 wherein n = 4, 5, 6, 7, and 8.

General procedure A

A diacid dichloride (0.01 mol) was added to a stirred solution of potassium hydroxide (1.68 g; 0.03 mol), hydroxylamine hydrochloride (0.7 g; 0.01 mol), and the corresponding aniline (0.01 mol) in 50% tetrahydrofuran (100 mL). The resulting reaction mixture was stirred at room temperature thirty minutes, and solvent was evaporated to solid residue. The solid residue was slurried in methanol (~100 mL) and dried over anhydrous magnesium sulfate. The methanol solution was separated

by filtration and evaporated to a solid residue. The product was purified by column chromatography on silica gel in ethyl acetate-tetrahydrofuran (in most cases 3:1). The yields were 15-30%.

General procedure B

corresponding monomethyl solution of dicarboxylic acid (0.01 mol), oxaloyl chloride (0.03 mol), and a few drops DMF in benzene (500 mL) was stirred room temperature overnight. The solvent evaporated and the oily residue was dissolved in dry and evaporated again. 50 mL) (3 X tetrahydrofuran (50 mL) solution of monoester monoacid chloride of the corresponding dicarboxylic acid was slowly added to a cooled solution of the corresponding amine (0.01 mol) and pyridine (1.6 mL; 1.6 g; 0.02 mol) The reaction mixture was in tetrahydrofuran (200 mL). stirred at room temperature for an hour. The solvent was evaporated, the reside was dissolved in chloroform (300 mL), and the chloroform solution was washed with 10% hydrochloric acid (3 x 50 mL), 10% potassium hydroxide (3 x 50 mL), and water (3 x 50 mL). The organic layer was dried over anhydrous magnesium sulfate and evaporated, yielding the pure monoester monoamide of dicarboxylic The product was dissolved in 80% methanol with potassium hydroxide (0.56 g; 0.01 mol). The reaction mixture was refluxed two hours and evaporated to solid residue. The residue was dissolved in water (~20 mL) and acidified to TpH 5 with 10% hydrochloric acid. monoacid monoamide of the dicarboxylic acid was isolated by filtration of precipitate or extraction water solution with chloroform. The isolated monoacid monoamide of the dicarboxylic acid was mixed together with an equivalent amount of O-benzylhydroxylamine and 1,3-dicyclohexylcarbodiimide in pyridine (~100 mL per 0.01 mol of 0benzylhydroxylamine) and was stirred at room temperature

10

15

overnight. The solvent was evaporated and the solid residue was partitioned between chloroform (500 mL) and 10% hydrochloric acid (300 mL). The organic layer was washed with water (3 x 100 mL) and dried over anhydrous magnesium sulfate. The solvent was evaporated to solid residue. The solid residue was dissolved in large amounts of tetrahydrofuran and filtered through a short column of silica gel. The crude product was dissolved in methanol (100 mL) and 5% Pd-C was added. The reaction suspension was shaken under hydrogen pressure (~50 psi) The catalyst was separated by filtration and overnight. filtrate was evaporated to solid residue. The solid residue was slurried in hexanes and filtered. pure product was isolated in this way. If necessary further purification was achieved by column chromatography on silica gel with ethyl acetatetetrahydrofuran. The yields were from 35% to 65%.

20

What is claimed is:

A compound having the structure:

wherein each of R₁ and R₂ are independently the same as or different from each other; when R_1 and R_2 are the same, each is a substituted or unsubstituted arylamino, cycloalkylamino, pyridineamino, piperidino, 9-purine-6-amine, or thiozoleamino group; when R_1 and R_2 are different, $R_1 = R_3 - N - R_4$, wherein each of R_3 and R_4 are independently the same as or different from each other and are a hydrogen hydroxyl group, a substituted unsubstituted, branched or unbranched alkyl, alkenyl, cycloalkyl, aryl, alkyloxy, aryloxy, arylalkyloxy, or pyridine group, or R_3 and R_4 bond together to form a piperidine group and R_2 is a hydroxylamino, hydroxyl, amino, alkylamino, dialkylamino or alkyloxy group; and n is an integer from about 4 to about 8.

25

2. A compound of claim 1 having the structure:

35

wherein each of R_3 and R_4 are independently the same as or different from each other and are a hydrogen atom, a hydroxyl group, a substituted or unsubstituted, branched or unbranched alkyl, alkenyl, cycloalkyl, aryl, alkyloxy, aryloxy,

arylalkyloxy, or pyridine group, or R_3 and R_4 bond together to form a piperidine group; R_2 is a hydroxylamino, hydroxyl, amino, alkylamino, dialkylamino or alkyloxy group; and n is an integer from about 4 to about 8.

- 3. A compound of claim 2, wherein R_2 is a hydroxylamino, hydroxyl, amino, methylamino, dimethylamino, or methyoxy group and n is 6.
- 10
 4. A compound of claim 3, wherein R_4 is a hydrogen atom and R_3 is a substituted or unsubstituted phenyl group.
- A compound of claim 4, wherein the phenyl group is 15 5. methyl, cyano, with a substituted trifluoromethyl, amino, aminocarbonyl, methylcyano, chloro, fluoro, bromo, iodo, 2,3-difluoro, difluoro, 2,5-difluoro, 3,4-difluoro, 3,5-difluoro, 2,6-difluoro, 1,2,3-trifluoro, 2,3,6-trifluoro, 20 3,4,5-trifluoro, 2,4,6-trifluoro, 2,3,5,6tetrafluoro, 2,3,4,5,6-pentafluoro, azido, hexyl, tcarboxyl, hydroxyl, methyoxy, phenyl, butyl, phenylaminooxy, benzyloxy, phenyloxy, phenylaminocarbonyl, methyoxycarbonyl, 25 methylaminocarbonyl, dimethylamino, dimethylaminocarbonyl, or hydroxylaminocarbonyl group.
- 6. A compound of claim 3, wherein R_4 is a hydrogen atom and R_3 is a cyclohexyl group.
 - 7. A compound of claim 3, wherein R_4 is a hydrogen atom and R_7 is a methyoxy group.
- 35 8. A compound of claim 3, wherein R_3 and R_4 bond together to form a piperidine group.

- 9. A compound of claim 3, wherein R_4 is a hydrogen atom and R_3 is a hydroxyl group.
- 10. A compound of claim 3, wherein R_4 is a hydrogen atom and R_3 is a benzyloxy group.
 - 11. A compound of claim 3, wherein R_4 is a hydrogen atom and R_3 is a δ -pyridine group.
- 10 12. A compound of claim 3, wherein R_4 is a hydrogen atom and R_3 is a β -pyridine group.
 - 13. A compound of claim 3, wherein R_4 is a hydrogen atom and R_3 is a α -pyridine group.
- 14. A compound of claim 3, wherein R_3 and R_4 are both methyl groups.
- 15. A compound of claim 3, wherein R_4 is a methyl group and R_3 is a phenyl group.
 - 16. A compound of claim 1 having the structure:

wherein R is a substituted or unsubstituted arylamino, cycloalkylamino, pyridineamino, piperidino, 9-purine-6-amine, or thiozoleamino group; and n is an integer from about 4 to about 8.

- 17. A compound of claim 16, wherein R is a substituted or unsubstituted phenylamino group.
 - 18. A compound of claim 17, wherein the phenylamino

group is substituted with a cyano, methylcyano, nitro, carboxyl, aminocarbonyl, methylaminocarbonyl, dimethylaminocarbonyl, trifluoromethyl, hydroxylaminocarbonyl, N-hydroxylaminocarbonyl, methoxycarbonyl, chloro, fluoro, methyl, methoxy, 2,3-difluoro, 2,4-difluoro, 2,5-difluoro, difluoro, 3,5-difluoro, 2,3,6-trifluoro, 2,4,6-3,4,5-trifluoro, 1,2,3-trifluoro, trifluoro, 2,3,4,5-tetrafluoro, or 2,3,4,5,6-pentafluoro group.

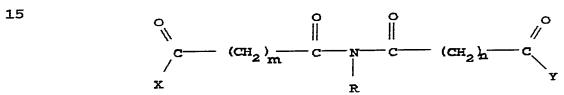

10

30

5

- 16, wherein R is а of claim 19. compound cyclohexylamino group.
- A compound having the structure: 20.

from about 0 to about 8.

wherein each of X and Y are independently the same 20 as or different from each other and are a hydroxyl, amino or hydroxylamino group, a substituted or unsubstituted alkyloxy, alkylamino, dialkylamino, alkyloxyamino, alkylarylamino, arylamino, alkyloxyalkylamino, aryloxyamino, 25 aryloxyalkylamino group; R is a hydrogen atom, a hydroxyl group, a substituted or unsubstituted alkyl, aryl, alkyloxy, or aryloxy group; of m and n are independently the same as or different from each other and are each an integer

A compound of claim 20, wherein each of X, Y, and R 21. is a hydroxyl group and each of m and n is 5.

22. A compound having the structure:

5

10

15

20

wherein each of X and Y are independently the same as or different from each other and are a hydroxyl, amino or hydroxylamino group, a substituted or unsubstituted alkyloxy, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, aryloxyalkylamino group; each of R, and R, are independently the same as or different from each other and are a hydrogen atom, a hydroxyl group, a substituted or unsubstituted alkyl, aryl, alkyloxy, or aryloxy group; and each of m, n, and o are independently the same as or different from each other and are each an integer from about 0 to about 8.

23. A compound of claim 22, wherein each of X and Y is a hydroxyl group and each of R_1 and R_2 is a methyl group.

25

- 24. A compound of claim 23, wherein each of n and o is 6, and m is 2.
- 25. A compound having the structure:

30

wherein each of X and Y are independently the same
as or different from each other and are a hydroxyl,
amino or hydroxylamino group, a substituted or
unsubstituted alkyloxy, alkylamino, dialkylamino,

arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group; each of R_1 and R_2 are independently the same as or different from each other and are a hydrogen atom, a hydroxyl group, a substituted or unsubstituted alkyl, aryl, alkyloxy, or aryloxy group; and each of m and n are independently the same as or different from each other and are each an integer from about 0 to about 8.

26. A compound having the structure:

wherein each of X and Y are independently the same as or different from each other and are a hydroxyl, amino or hydroxylamino group, a substituted or unsubstituted alkyloxy, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group; and each of m and n are independently the same as or different from each other and are each an integer from about 0 to about 8.

- 27. A compound of claim 26, wherein each of X and Y is a hydroxyl group and each of m and n is 5.
- 30 28. A compound having the structure:

5

10

wherein each of X and Y are independently the same as or different from each other and are a hydroxyl, amino or hydroxylamino group, a substituted or unsubstituted alkyloxy, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, aryloxyalkylamino group; each of R, and R, are independently the same as or different from each other and are a hydrogen atom, a hydroxyl group, a substituted or unsubstituted alkyl, aryl, alkyloxy, aryloxy group; and each of m and n are independently the same as or different from each other and are each an integer from about 0 to about 8.

15

10

29. A compound having the structure:

20

25

wherein each of X and Y are independently the same as or different from each other and are a hydroxyl, amino or hydroxylamino group, a substituted or unsubstituted alkyloxy, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group; and n is an integer from about 0 to about 8.

30

- 30. A compound of claim 29, wherein each of X and Y is a dimethylamino group and n is 5.
- 31. A compound of claim 29, wherein each of X and Y is a dimethylamino group and n is 4.

25

30

32. A compound having the structure:

wherein each of X and Y are independently the same as or different from each other and are a hydroxyl, amino or hydroxylamino group, a substituted or unsubstituted alkyloxy, alkylamino, dialkylamino, 10 alkylarylamino, alkyloxyamino, arylamino, alkyloxyalkylamino, aryloxyamino, each of R₁ and R₂ are aryloxyalkylamino group; independently the same as or different from each other and are a hydrogen atom, a hydroxyl group, a 15 substituted or unsubstituted alkyl, aryl, alkyloxy, aryloxy, carbonylhydroxylamino, or fluoro group; and each of m and n are independently the same as or different from each other and are each an integer from about 0 to about 8. 20

- 33. A compound of claim 32, wherein each of X and Y is a hydroxylamino group; R_1 is a methyl group; R_2 is a hydrogen atom; and each of m and n is 2.
- 34. A compound of claim 32, wherein each of X and Y is a hydroxylamino group; R₁ is a carbonylhydroxylamino group; R₂ is a hydrogen atom; and each of m and n is 5.
 - 35. A compound of claim 32, wherein each of X and Y is a hydroxylamino group; each of R_1 and R_2 is a fluoro group; and each of m and n is 2.

35 36. A compound having the structure:

10

wherein each of R_1 and R_2 are independently the same as or different from each other and are a hydroxyl, alkyloxy, amino, hydroxylamino, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group.

- 37. A compound of claim 36, wherein R_1 is a phenylamino group and R_2 is a hydroxylamino group.
- 38. A compound having the structure:

wherein each of R₁ and R₂ are independently the same as or different from each other and are a hydroxyl, alkyloxy, amino, hydroxylamino, alkylamino, dialkylamino, arylamino, alkylarylamino, alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group.

- 25 39 . A compound of claim 38, wherein R_1 is phenylamino group and R_2 is hydroxylamino group.
 - 40. A compound having the structure:

wherein each of R₁ and R₂ are independently the same
as or different from each other and are a hydroxyl,
alkyloxy, amino, hydroxylamino, alkylamino,
dialkylamino, arylamino, alkylarylamino,

alkyloxyamino, aryloxyamino, alkyloxyalkylamino, or aryloxyalkylamino group.

- 41. A compound of claim 40, wherein R_1 is a hydroxylamino group.
 - 42. A compound of claim 40, wherein R_2 is a hydroxylamino group.
- selectively inducing of 43. Α method 10 differentiation of neoplastic cells and thereby inhibiting proliferation of such cells comprises contacting the cells under suitable conditions with an effective amount of the compound of claim 1, 2, 16, 20, 22, 25, 26, 28, 29, 32, 36, 15 38, or 40, effective to selectively induce terminal differentiation.
- 20 characterized by proliferation of neoplastic cells which comprises administering to the patient an effective amount of the compound of claim 1, 2, 16, 20, 22, 25, 26, 28, 29, 32, 36, 38, or 40, effective to selectively induce terminal differentiation of such neoplastic cells and thereby inhibit their proliferation.
- 45. A pharmaceutical composition comprising a pharmaceutically acceptable carrier and a therapeutically effective amount of the compound of claim 1, 2, 16, 20, 22, 25, 26, 28, 29, 32, 36, 38, or 40.
- 46. A pharmaceutical composition of claim 45, wherein
 the effective amount is an amount effective to
 selectively induce terminal differentiation of
 suitable neoplastic cells and less than an amount

which causes toxicity in a patient.

47. A pharmaceutical composition of claim 45 in combination with an antitumor agent.

INTERNATIONAL SEARCH REPORT

International application No. PCT/US92/08454

A. CLASSIFICATION OF SUBJECT MATTER: IPC (5):

CO7D 473/02 211/26 211/28 211/30 277/20 277/44 277/02; CO7C 271/02 271/08 271/10 271/12 271/14 271/18 229/02 229/24 229/26 229/34 229/40 233/04 233/05 233/06 233/07 233/12 233/31 233/47 233/51 235/74 235/76 237/06 237/08 239/00

A. CLASSIFICATION OF SUBJECT MATTER: US CL:

544/277;546/190,224,225;548/195;560/29,30,31,55,104,105,159,160,170,190,192,205,215,;562/433,450,465,470,555,582,583,587,595,596,;564/152,155,158,160,161,169,170,171,182,188,192,193,194,197,199,200,201,202,204,209

B. FIELDS SEARCHED

Minimum documentation searched Classification System: U.S.

544/277;546/190,224,225;548/195;560/29,30,31,55,104,105,159,160,170,190,192,205,215,;562/433,450,465,470,555,582,583,587,595,596,;564/152,155,158,160,161,169,170,171,182,188,192,193,194,197,199,200,201,202,204,209

BOX II. OBSERVATIONS WHERE UNITY OF INVENTION WAS LACKING This ISA found multiple inventions as follows:

- I. CLAIMS 1-19 AND 29-35, DRAWN TO RING CONTAINING BIS-AMINO SUBSTITUTED ALKYL DERIVATIVES.
- II. CLAIMS 2 AND 20-21, DRAWN TO CARBOXYLIC ACID AMIDE SUBSTITUTED DERIVATIVES.
- III. CLAIM 22-24 DRAWN TO CARBAZIDE DERIVATIVES.
- IV. CLAIM 25 DRAWN TO BIS-CARBONYL CONTAINING AMIDE ALKYL DERIVATIVES.
- V. CLAIMS 26 AND 27 DRAWN TO BIS-AMIDE SUBSTITUED ARYL DERIVATIVES.
- VI. CLAIM 28 DRAWN TO BIS-CARBONYLAMINE SUBSTITUTED ARYL DERIVATIVES.
- VII. CLAIM 36-37 DRAWN TO DICARBOXYLIC ACID ARYL DERIVATIVES.
- VIII. CLAIMS 38 AND 39 DRAWN TO VINYL-CARBONYL ARYL DERIVATIVES.
- IX. CLAIMS 40-42 DRAWN TO CARBOXYLIC ACID VINYL DERVATIVES.
